* : as was already explained in the existing advciv code before mine: <!-- advc.251: Was 100. Note that this doesn't mean that humans have an advantage over the AI; ResearchPercent on Noble applies to all civs. -->

** : these defenders should much more often be warriors than archers, Ais don't start with hunting at any difficulty now which further delays the time where first archers are acquired. As archer-type of units are more enforced to be strictly defenders now, it may make the AI more versatile and efficient at its early game if it starts with more warriors that are sooner upgraded (and sooner Available) into axemen-spearmen, which can then be upgraded into macemen and such similar types of units. The purpose of this is to also make the AI stronger and more responsive in the early game, being more able to do rushes. Since archers should strictly never rush anymore now, it gives extra capacity for melee types of units to do so instead (but AI may also build chariots or similar types of units to assist the rushes or wars) Increasing this number may also help the AI's cities not be as often destroyed to early barbarian raids, which happens a bit too often Note : warriors now also have the CITY_DEFENSE role, so they may also replace archers at that role, at least in theory maybe.
